Mountain Weather Forecast

Lake District National Park

Forecast valid from 00:00 on Saturday 21 Aug 2021 until 23:59 on Sunday 22 Aug 2021

Forecast Issued on Friday 20 Aug 2021 at 12:15

Confidence: Confidence is high for a very wet day on Saturday then for increasingly dry conditions into next week. There is some uncertainty over the extent of showers on Sunday and for cloud amounts from Monday.

Headline for Saturday 21 Aug 2021: Near constant heavy rain and poor visibility across the hills. Thunderstorms possible.

Forecast for Saturday 21 Aug 2021

Weather: Rain will become widespread and often heavy through the early hours. This will leave a wet and dull start with further spells of rain never far away. Rain may abate for an hour or two through late morning before becoming more widely heavy and incessant into the afternoon. Thunderstorms will become an increasing risk too. Rain will gradually fade through evening but will leave widely misty and drizzly conditions.

Chance of cloud free mountain/hill tops above 800m: Virtually no chance.

Visibility: Cloud will be extensive above around 400m throughout the day and while the odd break is possible, these will be unreliable. This will lead to widely very poor visibility across the hills. Cloud bases may be closer to 600m across the northern Fells. Heavy, perhaps torrential rain will bring poor visibility to lower slopes too, this often obscuring nearby landmarks and features.

Freezing Level*	3200m	3100m	3000m	3000m	2900m	2800m	2800m	2800m	2700m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Heavy and likely incessant rain will lead to widely sodden ground, small watercourses may become swollen by the end of the day and some flooding of low lying ground, paths and roads is possible. In addition, lightning strikes are a real possibility.

Forecast for Sunday 22 Aug 2021

Weather: Thick cloud will continue to bring spells of drizzle and misty conditions through morning and will be slow to clear. Very wet conditions likely underfoot initially after Friday's rain. However, drier and brighter weather should develop by late morning, perhaps with some sunshine. Sunny spells and a few showers likely through afternoon, some of these on the sharp side.

Maximum wind: Northerly 15mph.

Chance of cloud free mountain/hill tops above 800m: 10% improving 70% from late morning.

Visibility: Extensive cloud above around 300m through morning bringing widely foggy conditions to all but the lowest levels. Cloud will break and lift erratically through morning allowing for some reasonable views. Areas of cloud above 500m will accompany afternoon showers.

Temperature: **Valleys:** Plus 14 Celsius rising to 20 Celsius.
At 800m: Plus 11 Celsius.
Freezing level: Well above summits.
